1. Introduction

Bus Scheduling and Booking System

The Online Bus Scheduling and Reservation System is a web-based application developed to simplify people's lives.

This is where users can book a seat on the bus from anywhere in the world at any time and get to their desired destinations in a short period of time.

Bus travel is a typical mode of transportation in Sri Lanka. However, when riding in buses, passengers face a wide range of challenges.

Some of these challenges are:

- Lack of familiarity with transportation schedules.
- Must go without a seat to the needed location.
- Poor understanding of trip costs.

Because of this inconvenience, we have created our online application as a way to get over those difficulties.

This application does not need to be downloaded to your computer, laptop, or mobile device in order to use it. It may be used directly from the online browser.

We also provide a 24-hour service and a customer support team that is available 24/7 to assist customers.

The passenger can choose their destination, time, and seat number after registering on our website. After providing the necessary details, the passenger can purchase the ticket online or in person using cash.

Anyone with access to the internet can look over the available schedule, routes, and buses, but they cannot make a reservation. In order to make a reservation, one should create a user account on our website, which saves the necessary information and register on our website.

Here are several services that are available to utilize without creating an account on the website.

- How many seats are available?
- Number of seats reserved.
- Bus routes accessible
- The route's appropriate bus timetable.

The reservation process for our web application entails multiple steps. Users must follow these procedures if they want to reserve a ticket.

- Choose the appropriate route.
- Choose the necessary travel times.
- Choose the necessary number of seats and
- Pay with an essential payment option.

Following this action, we will test the user's mobile phone and the ticket number for the customer to verify that their ticket booking was successful.
